Line of pseudocode statement	Num1	Num2	SmallerNum	HighestFactor	Output
1. Enter Num1	12				
2. Enter Num2		18			
3. If Num1 < Num2 Then			true		
4. Num1 = SmallerNum			12		
5. Else Num2 = SmallerNum			false		
6. Set HighestFactor = SmallerNum				=12	
7. While 12 mod 12 != 0 OR 18 mod 12 != 0				Condition is false	
8. Highest Factor - = 1					
7. While 12 mod 11 != 0 OR 18 mod 11 != 0				Repeat from 10 – 7 Condition is false	
8. Highest Factor - = 1					
7. While 12 mod 6 != 0 OR 18 mod 6 != 0				6 Condition is true, the loop stops	
8. Print (HighestFactor)					6
